AI Engineer | Intelligent Systems, Automation, and Autonomous AI

Summary

Senior AI student at Alexandria University focused on intelligent pipelines, generative AI, and autonomous systems. Experienced in building AI automation workflows, multimodal systems, and scalable content pipelines using LLMs, open-source models, and production-minded tooling.

Experience

Armstrong

AI and Automation Engineer

Jul 2024 – Present

Alexandria, Egypt

- Led automation work for the Digital Egypt Cubs Initiative (DECI), a national program under Egypt's Ministry of Communications and Information Technology.
- Built AI-driven workflows using n8n, CustomGPTs, and open-source models to automate presentations, teacher guides, and educational videos at scale.
- Designed repeatable content pipelines that reduced manual work, improved delivery speed, and standardized quality across schools.

Armstrong

Content Creator

Aug 2024 – Present

Alexandria and Cairo, Egypt

- Developed technical presentations, teacher guides, and educational videos covering AI, robotics, Arduino, and programming for international schools.
- Translated complex engineering topics into structured instructional content for educators and learners.

Engineering for Kids

Technical Instructor

Jun 2023 – Present

Alexandria, Egypt

- Taught students aged 11–16 AI, robotics, Arduino, circuits, Python, and C++ through project-based STEM instruction.

O-Academy

Coding Instructor

Feb 2025 – Present

Remote

- Conduct live coding sessions for U.S.-based students across Scratch, Roblox Studio, Python, and MIT App Inventor.

Projects

SAGA: Narrative Intelligence System

Python, Streamlit, LLM Pipelines, RAG

- Built a narrative intelligence system that ingests EPUB and PDF books, splits them into scenes, and extracts structured story knowledge for downstream generation and analysis.
- Produced reusable outputs including entity registries, canon snapshots, timeline events, causal graph metrics, and searchable story indexes.

DUM-E: ESP32 Robotic Arm Platform

Python, ESP32, Streamlit, Robotics

- Built a robotic arm platform combining ESP32 firmware, a Streamlit control dashboard, and ROS2-style interfaces for calibration, control, and motion planning.
- Implemented sequence recording, FK/IK-assisted path planning, and guarded pick-and-place execution.

VisionDeck CV Suite

Python, Streamlit, OpenCV, MediaPipe, YOLO

- Developed a modular computer vision dashboard unifying face detection, hand gesture recognition, and real-time object detection with webcam and Android IP camera support.

Education

Alexandria University, Faculty of Computer and Data Science

B.Sc. in Computer Science (Intelligent Systems)

2022 – 2026

Alexandria, Egypt

Leadership

ElCoder

Head of AI Committee

Alexandria, Egypt

- Led student workshops and technical sessions on AI and machine learning fundamentals.

Skills

Languages and Tools: Python, C++, Docker, n8n, Arduino, Streamlit

AI and ML: LLM systems, RAG pipelines, workflow automation, Stable Diffusion, LoRA fine-tuning, NLP, computer vision, multimodal systems

Systems Focus: Autonomous agents, AI pipelines, robotics integration, content automation

Certifications

Machine Learning Specialization | Deep Learning Specialization | Google Cloud Big Data and Machine Learning Fundamentals
